

STAT-EASE 360

From its foundation of world-class features from Design-Expert® software for design of experiments (DOE), Stat-Ease® 360 adds sophisticated tools for power users, such as:

- Python scripting - write automated scripts and custom code; combine the power of this high-level programming tool with Design-Expert in one seamless workflow
- Space-filling designs - ideal for computer experiments
 - Latin hypercube designs featuring only one run at each level of every factor
 - Optimal (maximin, distance-based) designs evenly distribute points throughout the region
 - Gaussian process models - ideal for deterministic data, e.g., from simulations
- Import/Export compatibility with Microsoft Excel to smoothly transfer factor levels & response data
- Logistic classification - ROC curve plots and other graphical views
- More to come!

Stat-Ease 360 will be continuously developed, with new features released to active subscribers as they're ready. Jump on board for cutting-edge DOE software that will only keep improving!

FEATURES	DESIGN-EXPERT	STAT-EASE 360
Factorial, Response Surface, and Mixture Designs	✓	✓
DOE analysis tools & diagnostics	✓	✓
Graphs & reports for sharing data and visualizing models	✓	✓
Python Scripting		✓
Space-filling designs with Gaussian process modeling		✓
Excel import/export compatibility		✓
