

Alfasoft Online Demo Days 2025 – Day 1, Citavi

Question	Answer
Is it possible to import a database from Citavi, including PDF files, to EndNote 2025 and vice versa?	EndNote can only import text files (exported from Citavi). You will have to attach the PDF files after importing the reference data. Citavi can import an EndNote library, including PDF files. An alternative is to let EndNote import all the PDFs and create the references for you.
How much memory do I need to keep the attachments?	Citavi projects are loaded to RAM when the project is opened. The maximum project size depends on the structure of your data (the number of authors, knowledge items, etc.), but usually is somewhere between 25,000 and 50,000 references. If you work with Cloud projects, you can purchase additional Citavi Space if needed. The standard is 5 GB in the Citavi Cloud. You can buy extra storage in our webshop.
Local and cloud storage limits	Local storage is limited by your hard drive. Cloud storage is 5 GB, with additional GB available for purchase in our webshop.
